

## Brainstorming & Idea Prioritization Template

|                      |               |
|----------------------|---------------|
| <b>Date</b>          | 26 June 2026  |
| <b>Team ID</b>       |               |
| <b>Project Name</b>  | Rising Waters |
| <b>Maximum Marks</b> | 3 Marks       |

### Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

| <b>S.No</b> | <b>Team Member</b>     | <b>Idea / Suggestion</b>                | <b>Category</b>  | <b>Group No.</b> |
|-------------|------------------------|-----------------------------------------|------------------|------------------|
| 1           | Doprajna Sai Vadlamudi | Flood prediction using ML model         | Machine Learning | 1                |
| 2           | Vedha Sri Tallam       | Real-time weather data input system     | Data Input       | 1                |
| 3           | Debosmita Mukhopadhyay | Early warning alert system              | Alert System     | 2                |
| 4           | Madugundu Surendra     | Web-based dashboard for prediction      | Web Application  | 2                |
| 5           | Doprajna Sai Vadlamudi | Historical rainfall data analysis       | Data Analysis    | 3                |
| 6           | Debosmita Mukhopadhyay | Risk level classification (Safe/Danger) | Classification   | 3                |

## Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

| Group No. | Final Idea                                         | Feasibility (High/Medium/Low) | Importance (High/Medium/Low) | Priority | Selected (Yes/No) |
|-----------|----------------------------------------------------|-------------------------------|------------------------------|----------|-------------------|
| 1         | ML-based flood prediction using weather parameters | High                          | High                         | 1        | Yes               |
| 2         | Web-based prediction + alert system                | High                          | High                         | 2        | Yes               |
| 3         | Data analysis with rainfall patterns               | Medium                        | High                         | 3        | Yes               |
